

- Perforated smoke hose with a length of 10 meters and a diameter of 152 mm.
- Including an adapter for the FireWare Cumulus/Stratus.
- Including a plastic box measuring 60x40x32,5 cm
- Equipped with wear strips.
- Equipped with cuffs for connection to pipes.
- Equipped with loops and straps for attachment.

Product details

The Smoke Hose Set consists of a box with an adapter for the FireWare Cumulus/Stratus and a smoke hose with a diameter of 152 mm. The significant size and the skeleton of metal rings means a vast amount of smoke can be transported through the hose.

The FireWare Perforated Smoke Hose will allow you to, for example, simulate SFTF signals by placing the perforated smoke hose along the eaves. Or what would you say to a realistic wildfire by allowing small puffs of smoke to come out of the perforated holes across a larger area?

The outside of the smoke hose is equipped with wear strips, which ensure the hose is very resistant to being dragged along the ground, as well as heavy applications. Cuffs have been applied to both ends of the hose. These cuffs make sure the hose can easily be secured to piping, for example. The three attachment loops and the integrated straps can be used to fix the hose.
