

- Adds the scent of a fire to FireWare smoke fluid
- Highly suitable for outdoor use when combined with Outdoor smoke fluid
- Not suitable for use in Cirrus fluid
- Dosage 5-25ml with 5L smoke liquid

### Product details

Burning smell extract is used to add the scent of a fire to FireWare smoke fluid. The realistic level of a training exercise increases as this scent is added. In general, the first sense that is triggered in case of a fire, is scent. It helps signalling and locating the fire. Trigger your trainees by adding the scent of a fire to your fire training exercise!

Use the convenient dosing cap to measure the necessary volume of burning smell extract. We advise a minimum mixing ratio of 5 millilitres and a maximum mixing ratio of 25 millilitres on a 5 litre can. Note that the scent will linger.

This burning smell extract is very suitable for outside use when combined with Outdoor smoke fluid. Just think of how realistic a wild fire training will become.
