

- For testing fall protection and climbing harnesses.
- Great for high altitude rescue exercises.
- Simulates an unconscious adult.
- Realistic height to weight ratio.
- Stiff equipment in the hull, reduces the risk of collapse in the harness.
- Made of flame retardant polyester.
- Extremely robust.
- Supplied with sturdy rubber boots.

Product details

Extremely robust, realistic dummy for exercises

The manikin is 180cm and weighs 100kg. The dummy suitable for high altitude rescues with a harness. The dummy is wearing a strong overall and is supplied with solid rubber boots. The rubber boots can be replaced separately if damaged.

This Drop test training manikin by Ruth Lee has a realistic proportion between length and weight. The stuffing in the dummy is fixed and as a result all the limbs have a realistic weight that does not move around. The dummy is very solid and can be run over or fall from a high altitude without damaging. There is a strong loop at the back, which is handy when handling the dummy during preparations.
