

- Manikin splits into smaller parts with no individual component weighing more than 25kg.
- Due to its detachable limbs it is easier to position in your rescue scenario, especially for training such as confined space.
- Anatomically correct weight distribution to give the feel of an unconscious casualty.
- Strong webbing loop at the back allows easy handling, hauling aloft, storage and suspension for drying.
- Tough enough to withstand being buried under concrete or steel lintels, driven over by a 4x4 vehicle, or dropped from a 2nd floor window without damage (approx 4 meters).
- Water repellent material, making it suitable for wet or foul scenarios such as HAZMAT/CBRN.
- Soft body joints to eliminate the risk of pinch welts and bruising; common injuries when using plastic bodied manikins.

Product details

Ideal for scenarios in confined spaces

The Confined Space manikin is specially designed for rescue scenarios in a confined space. The limbs can be separated into components weighing no more than 25 kilograms. Therefore making it easier to position the manikin in your rescue scenario. The dummy has an anatomically correct weight distribution to give the feel of an unconscious adult.

By means of the webbing loop at the back, you can easily lift, store and dry the manikin. Because the manikin is primarily developed for rescues in confined spaces, it is tough enough to withstand many. For example, try burying the dummy under lintels. Simulate a drive-over by a 4x4 car or a drop from a second floor window without damage. Or create a wet or foul scenario in the context of HAZMAT / CBRN. Note that the manikin is water-repellent, but not completely water-resistant. A manikin for water rescue better suits here.

In addition to exercises in confined spaces, you can also use this manikin for search and rescue training scenarios, for exercises of road accidents and for mountain or cave rescue scenarios. The Confined Space manikin comes complete with boots, which are easily replaced if damaged.
