- Anatomical landmarks, such as sternum and ribcage.
- Also suitable to use with a practice AED.
- Comes supplied with 3 airway systems and 3 mouth/nose pieces.
- In foldable carrier bag with kneepads.

Product details

With Brad you can exercise the basic resuscitation techniques. When insufflated correctly the chest rises visibly. The insufflation is done in an airway system that prevents cross-infection between students. You can provide every student with his or her own mouth/nose piece or disinfect it in between.

The torso feels realistic and has various anatomical features. The ribcage and the sternum can properly be felt; as a result it is possible to determine the correct location for the hands when applying heart massage. It is also possible to work with a practice AED.

Brad weighs only 7 kilograms and can easily be moved. The torso comes supplied with 3 airway systems, 3 mouth/nose pieces and a carrier bag supplied with handy kneepads.

Combine Brad with the Body for CPR for a complete and solid body.
