

- Simulating explosions to 120 decibel.
- With a single touch of a button.
- Interval and volume adjustable.
- Including reduction valve, battery and charger.
- Works on propane.
- Not suitable for interior use.
- Remote control is included.

Product details

Blast to as much as 120 decibels

With the Electronic Explosion Simulator, you can simulate the sound of an explosion to as much as 120 decibels in a legally acceptable way. It is possible to simulate an explosion at the push of a button. The blast interval is regulated electronically using a built-in timer.

You can control the volume by sliding the barrel in or out. The sound effect is impressive and vibrates the area ... The equipment is therefore not suitable for interior use. The Explosion Simulator has a regulator valve and works on a normal propane bottle, which is not provided. A battery, charger and remote control are provided.
