FIREWARE

CREATING REALISTIC TRAINING ENVIRONMENTS

Article number	025-100-102
Category	Training Fire Extinguishers

- Learn to extinguish fires without the need for a fire, water, foam or powder.
- Prepare students for real-life situations in any practice area.
- Operate the Apollo LED using the push button, exactly like a real extinguisher.
- Built-in sound effects that replicates a sputtering extinguisher when empty.
- The virtual tank gradually empties while extinguishing.
- Comes with stickers in Dutch, English, French and German.
- Also available with a squeeze handle or CO2.

Product details

Effectively train students to extinguish fires without the need for a fire, water, foam or powder

Use the Apollo LED Training Fire Extinguisher Push Button 6 L to teach students proper techniques for extinguishing fires. Because the extinguishing spray is simulated using LED lighting, you can practice in places where it would normally be impossible or difficult to do so or where water, foam or powder cannot be used. The training fire extinguisher weighs the same as a real fire extinguisher, which means that students handle it the same way they would handle an actual extinguisher.

LED Practice Foam Extinguisher Push Button
The instructor simply activates the Apollo LED Training Fire Extinguisher Push Button by pushing a button located on the top. The practice extinguisher works exactly like a standard button-operated extinguisher and can now be handed over to the student.

Before the student can activate it, the safety pin must be removed from the extinguisher, after which the squeeze handle can be operated as soon as the button is depressed. When the handle is squeezed the extinguisher replicates the sound of a real extinguisher spraying. A powerful blue LED light is also emitted from the nozzle, allowing the instructor to teach the student how to focus the extinguishing agent. A

further dimension can be added to the exercise using the Phoenix Silkflame or Seat-of-Fire training set.

The Apollo LED Training Fire Extinguisher Push Button has a virtual tank that gradually empties while it is in use. The tank level is shown using 4 LED lights. The fire extinguisher can operate for about half a minute on a full tank, and when it is almost empty the practice extinguisher replicates the sound of a sputtering extinguisher. The Apollo LED is battery-operated and can be recharged using the supplied micro-USB cable.

Teach extinguishing techniques in a setting free of fire, water, foam or powder
There are times when a real fire cannot be used in an exercise area, such as in a school building or museum. This is where the Apollo LED Training Fire Extinguisher Push Button is the perfect solution, and in a single day a large number of people can be trained in extinguishing techniques without the associated risks of a fire. The Apollo LED extinguisher does not create a mess and the next student can quickly take his or her turn.

If you need to practice using other operating mechanisms, the FireWare Apollo LED Training Fire Extinguisher Push Button is also available with a squeeze handle and with CO2.

Teach extinguishing techniques remotely
You may also want to teach extinguishing techniques remotely, such as during this time of the coronavirus outbreak. Thanks to the Apollo LED Training Fire Extinguisher you can simply continue with your courses. Using a video conferencing platform, such as Zoom, Microsoft Teams or BigBlueButton, the instructor can share a screen. Simply display a video of a small fire and the student can 'extinguish' the monitor using the Apollo LED Training Fire Extinguisher, demonstrating which extinguishing skills the student has. The instructor can watch on a webcam and provide feedback. The training fire extinguisher is quickly recharged for the next use.

Technical information

Brand:	FireWare
Battery:	High Power Lithium Ion
Product weight (kg):	10,00
Length (cm):	60
Diameter product (cm):	15,0
Colour:	Red
Tank capacity (L):	6
Guarantee:	2 years on product and manufacturing defects
