

- Extinguishing Trainer for several different fires.
- Functions with or without water.
- Operational within several minutes.
- Unique perforated stainless steel bottom plate.
- To extinguish using CO2, foam or water.
- Strong aluminium sides.
- Complete tread plate enclosure.
- Weighs only 14 kg.
- Ignition by hand.
- Including gas hose.

### Product details

#### Extinguisher trainer for practicing extinguishing techniques

The Hybrid can be used to simulate a fire for practicing several techniques of extinguishing. A unique feature about the Hybrid is that it can be used with, as well as without water. The flames are wide and dynamic when you use water, but without the water the fire is also complete, thanks to the unique perforated stainless steel bottom plate.

Students can extinguish using CO2, foam or water. The flames will vanish when the instructor stops the gas flow with the handle on the gas hose. Foam that remains can easily be drained through the holes in the side of the extinguisher trainer. The Hybrid is suitable for different kinds of gas, like propane, lpg and butane, as long as it goes into the extinguisher trainer in the form of gas.

The construction is made of strong aluminum sides and the enclosure is made completely out of tread plate. Despite these strong materials, it only weighs 14 kilos. The Hybrid can be set up by one person and is operational within minutes. You connect the gas hose, squeeze the handle and ignite the extinguisher trainer with the special distiller (excluded). As long as the instructor squeezes the handle, the fire will keep on burning.
