

- Ignition lance for gas-fired fire props
- Excellent to combine with the FireWare Hybrid Fire Trainer
- Safe design with safety switch
- One-hand operation
- Includes 9V battery

Product details

The Spark ignition lance offers a safe and easy way to ignite gas-powered fire props. The lance truly comes into its own when used in combination with, for example, the FireWare Hybrid Extinguisher Trainer or Solid Fire Extinguisher Trainer.

No open flame

In the past, gas fire props were often ignited with a flame torch. The disadvantage of this method is the constantly present open flame. A training environment must be a safe environment, and the use of open fire does not align with that—it also sends the wrong signal to trainees.

With the Spark ignition lance, those days are gone. Gas-fired props are ignited at the push of a button. The spark in the head of the lance ensures a controlled and safe ignition every time.

Safe design

Safety was the main guideline during the design of the ignition lance. The ignition button is located under a protective flap to prevent accidental use. The spark is generated entirely in the head of the lance, meaning the user cannot come into contact with the ignition point.

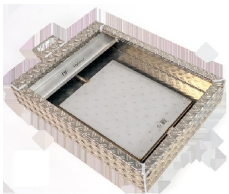

Battery

The ignition lance runs on an easily replaceable 9V battery. This eliminates the hassle of small gas cartridges. A battery is included as standard.

Technical information

Brand:	FireWare
Product weight (kg):	
Length (m):	1
Length (cm):	100
Weight kit (kg):	0,6
Dimensions of the set in cm (LxWxH):	1,0 x 0,4 x 0,7
Material:	Aluminium
Colour:	Black
IP rating:	IP20
Guarantee:	2 years on product and manufacturing defects
